## POWER Consumption Table

These figures are approximate representations. The actual power consumption of your equipment may vary substantially from these figures. Check the power tags, or better yet, measure the amperage draw with a clamp-on ammeter.

Multiply the hours used on the average day by the wattage listed below. This will give you the "watt-hours" consumed per day, which you can then plug into the load evaluation form. Remember that some items are used only for a fraction of an hour or minute per day. Example: A 300 watt item used for 5 minutes per day will only consume 25 watt hours per day.

We strongly suggest that you create a "watts-hours" table like the one below:

<b>Appliance</b>	<b>Watts</b>	<b>Appliance</b>	<b>Watts</b>
Microwave Radio	200	Telemetry System	60
Cellular Base Station	800	Air Conditioning	1000
Fluorescent Lights	50	Fire Alarm System	10-25
